

Juan Manuel Santos

Mathematics Student | Programming | Cybersecurity

PROFESSIONAL PROFILE

I combine the rigor of mathematical logic with 5 years of experience in functional and object-oriented programming. Passionate about algorithmics and complex problem-solving, I am currently directing this analytical foundation towards corporate cybersecurity and quantum computing, with the goal of providing efficient and secure solutions in technological environments.

EDUCATION

BSc in Mathematics | *University of Málaga* | 2021 - Present

- **Theoretical & Logical Foundation:** Special interest in algebra, topology, and geometry, orienting their analytical rigor towards cryptography and quantum computing.
- **Applied Mathematics:** Practical capacity in optimization, probability, and statistics, oriented towards algorithmic resolution and data analysis.
- **Software Development:** Practical training in advanced programming (Haskell, Scala, and Python), connecting mathematical logic with computational efficiency.

PROFESSIONAL EXPERIENCE

Geometry & Programming Instructor | UNITEC Academies | Sept. 2024 - Present

- University-level instruction in Geometry and Programming (Python, Haskell, and Scala) for first-year BSc Mathematics students.

Private Tutor (Freelance) | Sept. 2017 - Present

- Since 2022, university-level private tutoring in Geometry and Computer Science (Haskell and Scala).
- Mathematics tutoring for Secondary and High School students.

TECHNICAL CERTIFICATIONS

Cybersecurity MOOC | *INCIBE & UMA* | 2025 - 2026

- 65 hours of specialized training in network security, applied cryptography, secure programming, and malware analysis.

Cyber Bootcamp | *Google.org & UMA* | 2025

- Intensive hands-on workshops in simulated environments for incident response and ethical hacking techniques.

Qiskit Fall Fest | *IBM Quantum & Quant-UMA* | 2025

- Practical introduction to quantum algorithmics and circuit implementation using the Qiskit framework.

Introduction to Data Science | *Santander Open Academy* | 2024

- Exploratory data analysis, data visualization, and predictive modeling with Python.
